## **DETAILED ACTION**

Claims 1-95 are pending.

### Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-22, drawn to a wood preservative composition classified in class 427, subclass 123 comprising:
- (a) an inorganic component selected from a group consisting of a metal, metal compound and combination thereof; and
- (b) one or more organic biocides wherein at least the inorganic component or the organic biocide is present as micronized particles.
- II. Claims 23-48 and 57, drawn to a method for preserving a wood product, classified in class 504 subclasses 114 and 214 comprising the step of contacting the product with a wood preservative composition comprising:
- (a) an inorganic component selected from a group consisting of a metal, metal compound and combination thereof; and
- (b) one or more organic biocides wherein at least the inorganic component or the organic biocide is present as micronized particles
- III. Claims 49-56, drawn to a wood preservative composition, classified in class 508, subclass 101 comprising a dispersion of micronized particles selected from the group

Art Unit: 4133

consisting of copper, copper hydroxide, copper carbonate, basic copper carbonate,

copper oxychloride, copper 8-hydroxyquinolate, copper dimethyldithiocarbamate,

copper omadine, copper borate and combinations thereof, wherein the size of the

particles is between 0.005 to 25 microns.

IV. Claims 58-80, drawn to wood through which is distributed a preservative

composition, classified in class 424, subclasses 617 and 106 said composition

comprising:

(a) an inorganic component selected from a group consisting of a metal, metal

compound and combination thereof; and

(b) one or more organic biocides wherein at least the inorganic component or the

organic biocide is present as micronized particles

V. Claims 81-95, drawn to wood treated with a copper preservative, classified in class

424, subclasses 622 and 630 in wherein leaching of copper is less than 5% of the total

copper in the wood, as measured according to American Wood Preservers' Association

Standard E11-97.

Note: For restriction purposes, the examiner interprets groups IV and V to be drawn to

a method of treating wood.

The inventions are distinct, each from the other because of the following reasons:

Groups I /III and II/IV/V are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In the instant case the process as claimed can be practiced with another materially different product such as applying a water- borne preservative such as chromated copper arsenate or alkine copper quaternary.

Because these inventions are distinct for the reasons given above and the search required for group I is not required for groups II-V, restriction for examination purposes as indicated is proper. Groups I-V are not identically classified under U.S. Patent Classification guidelines, thus, to search them together would present a search burden on the Examiner. Moreover, the searches in non-patent literature databases are extensive and do not overlap thus presenting a search burden to be searched together. Thus, groups I-VI have been appropriately restricted on the basis of being both independent or distinct and presenting a search burden on the Examiner if they were to be searched together.

Restriction for examination purposes as indicated is proper because all these inventions listed in this action are independent or distinct for the reasons given above

Application/Control Number: 10/821,326

Art Unit: 4133

and there would be a serious search and examination burden if restriction were not required because one or more of the following reasons apply:

- (a) the inventions have acquired a separate status in the art in view of their different classification;
- (b) the inventions have acquired a separate status in the art due to their recognized divergent subject matter;
- (c) the inventions require a different field of search (for example, searching different classes/subclasses or electronic resources, or employing different search queries);
- (d) the prior art applicable to one invention would not likely be applicable to another invention;
- (e) the inventions are likely to raise different non-prior art issues under 35 U.S.C. 101 and/or 35 U.S.C. 112, first paragraph.

Applicant is advised that the reply to this requirement to be complete <u>must</u> include (i) an election of a invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse. Traversal must be presented at the time of election in order to be considered timely. Failure to timely traverse the requirement

will result in the loss of right to petition under 37 CFR 1.144. If claims are added after the election, applicant must indicate which of these claims are readable on the elected invention.

If claims are added after the election, applicant must indicate which of these claims are readable upon the elected invention.

Should applicant traverse on the ground that the inventions are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

#### Election

This application contains claims directed to the following patentably distinct species: (a) enhancing agents that are trialkylamine oxides in claims 36,47,55,78, and 94 and (b) enhancing agents that are alkoxylated diamines in claims 37,48,56,79, and 95. The species are independent or distinct because due to significant variation in the claimed genus compound, a comprehensive search of any one compound would not necessary be a coextensive search for any one or more of the other compounds.'

If the applicant elects Group II, III, IV, or V, an election of a single species of (a) enhancing agent that is a trialkylamine oxide, and of (b) an enhancing agent that is an alkoxylated diamine must also be made. All constituents on the generic formula of the elected compound must be identified.

Application/Control Number: 10/821,326

Art Unit: 4133

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1- 95 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species.

MPEP § 809.02(a).

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Page 8

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

## Rejoinder

The examiner has required restriction between product and process claims.

Where applicant elects claims directed to the product, and the product claims are subsequently found allowable, withdrawn process claims that depend from or otherwise require all the limitations of the allowable product claim will be considered for rejoinder.

All claims directed to a nonelected process invention must require all the limitations of an allowable product claim for that process invention to be rejoined.

Art Unit: 4133

In the event of rejoinder, the requirement for restriction between the product claims and the rejoined process claims will be withdrawn, and the rejoined process claims will be fully examined for patentability in accordance with 37 CFR 1.104. Thus, to be allowable, the rejoined claims must meet all criteria for patentability including the requirements of 35 U.S.C. 101, 102, 103 and 112. Until all claims to the elected product are found allowable, an otherwise proper restriction requirement between product claims and process claims may be maintained. Withdrawn process claims that are not commensurate in scope with an allowable product claim will not be rejoined. See MPEP § 821.04(b). Additionally, in order to retain the right to rejoinder in accordance with the above policy, applicant is advised that the process claims should be amended during prosecution to require the limitations of the product claims. Fallure to do so may result in a loss of the right to rejoinder. Further, note that the prohibition against double patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP § 804.01.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR Only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electron
